

In order to fulfil the principles of environmental protection, prior to the significant environmental impact of the activities, services and products of DEZA, a. s. on the environment, the senior management of the company adopted an environmental policy in which it undertakes to:

- ensure the permanent and consistent fulfilment of all requirements of the valid legislation and other commitments adopted by Deza in the area of environmental protection while executing the production activities and services and within the development and handling of new technologies and products, the improvement of the technical parameters of the production equipment with the aim of permanent improvement and the decrease of the negative impacts of the operation of production equipment on all elements of the environment.
- permanently decrease the specific consumption of raw materials, energies and media per unit of production,
- improve the quality of the working environment in the workplaces and the environment in the surroundings of the enterprise,
- increase the knowledge of employees in the area of the protection of the working and living environment regarding the negative impact of the production and non-production activities of the enterprise, provided services and products on the environment, regarding the necessity to minimize negative impact, as well as the necessity to permanently improve all parameters of the production and behaviour of employees while executing production and non-production procedures and the handling of hazardous chemicals,
- prevent environmentally significant operating failures by organising staff training in preparation and anti-accident procedures with the aim of minimizing the environmental impact of accidents with technological equipment and accidental escapes of hazardous materials,
- fully inform staff and interested parties in good time of all significant impacts of activities, services and products of the company on the environment,
- inform the respective bodies and the public of the consequences of any potential or actual accidents,
- cooperation with the surrounding municipalities in the area of the bilateral exchange of relevant information regarding the status and development of the environment and the overall strain on the environment by harmful elements from all sources near the enterprise,
- provide environmentally relevant information to business partners, in particular information concerning risky properties of products, familiarization of employees of delivery firms working in the site of the company with the principles of environmental control and with the procedures for prevention of pollution and the decrease of the

environmental impacts of activities, services and products.

**The fulfilment of the principles of the environmental policy within the activities and competences is the responsibility of all departments of the company with the objective that the development of the enterprise permanently and irreversibly decreases all negative impacts of the company on the working and living environment.**
